

VACATION CARE

Short Time Periods (3 - 5 Days):

- Adjust the alkalinity and pH by following the instructions outlined in the Water Quality and Maintenance section (see owner's manual)
- Sanitize the water by following the shock procedures also listed in the Water Quality section.
- Lock your cover in place using the tiedowns.
- **Upon Your Return:** Sanitize the water by following the shock procedure.

Long Time Periods (6 - 14 Days):

Prior to Leaving:

- At least one day before you leave, set the temperature to its lowest level. **IMPORTANT NOTE:** Spa water oxidizers such as chlorine maintain their level of effectiveness substantially longer in warm water (80 degrees) than in hot water (101 + degrees).
- Adjust the alkalinity & pH as required. Sanitize the water by following the shock procedures.
- **Upon Your Return:** Sanitize the water by following the shock procedure.
- *NOTE: If you will be gone for longer than 14 days, please call for direction.*
